

November 10, 2014

Ms. Mandy Grewal
Supervisor
Pittsfield Charter Township
6201 W. Michigan Avenue
Ann Arbor, MI 48108-9721

Dear Ms. Grewal:

I am writing to update you on the status of the Line 6B Pipeline Replacement Project.

On October 1, 2014, the new pipeline was placed into service, marking more than two years of pipeline construction and \$2.6 billion in capital investments to replace and expand 285 miles of Enbridge's pipeline system in Michigan and Indiana. While the new pipeline may be in service, we recognize that our work on the right-of-way is not yet complete. We are still in the process of deactivating the original Line 6B pipeline. We are also restoring properties affected by construction. The restoration work will continue as long as weather permits and will resume in the spring when Enbridge crews return to reseed, plant trees, and perform other necessary tasks on properties that have not already been restored.

Because this work is ongoing, Enbridge crews will continue to be present in some communities, so the potential for issues and concerns to be raised by landowners and the public still exists. Therefore, Enbridge is maintaining its restoration offices in Valparaiso, Indiana and Shelby Township, Michigan, and the project toll-free number (1-866-410-4356) will remain active as long as is necessary. Should you be contacted by your constituents, we encourage you to direct them to one of these resources.

Line 6B is an integral part of the region's critical energy infrastructure, providing a safe and efficient crude oil transportation system for reliable delivery of North American crude oil to numerous refineries in both the U.S. and Canada. As a result of the Line 6B Pipeline Replacement Project, the capacity of the system has been restored and there should be fewer maintenance activities in the future.

On behalf of Enbridge, I want to thank you for your patience, cooperation and understanding during the construction process. If you have any questions or comments about either the Line 6B Pipeline Replacement Project or the contents of this letter, please contact Jason Manshum, U.S. Public Affairs Specialist at (269) 781-1504 or Jason.Manshum@enbridge.com.

Sincerely,

A handwritten signature in black ink that reads 'Thomas D. Hodge'.

Tom Hodge
Project Director

Replacement pipeline is operating and right-of-way is being restored

The Line 6B replacement pipeline is operating and delivering secure supplies of North American crude oil. Restoration activities such as grading, seeding and mulching of the right-of-way are substantially complete but challenging areas are still being addressed. While there is landscaping work to complete in some residential areas, most of the dirt work requiring heavy equipment is finished. Project restoration crews are becoming smaller and in many cases have completed their work. Crews will continue working on the right-of-way this fall as long as weather permits. Restoration crews will be back in the spring as soon as possible to make sure properties are returned to their pre-construction condition.

Dear Landowners and Public Officials:

Enbridge is now operating the entire 285 miles of the replaced Line 6B pipeline system. This means Enbridge can continue meeting the petroleum needs of refiners and consumers in Michigan, Indiana, and neighboring communities with North American produced crude oil.

The Line 6B system has been improved through the use of heavier wall pipe, new coating, additional remote operated valves and a new cathodic protection system.

Enbridge's total capital investment has been approximately \$2.6 billion, which includes the replacement pipe, pump stations, and associated station and terminal facilities. The work involved nearly 8 million hours of labor. Enbridge property taxes associated with the replacement pipeline have increased and will continue to benefit the communities where Enbridge operates.

The remaining work includes deactivating the original Line 6B and completing restoration efforts. Property restoration work will continue until winter weather forces a suspension of restoration efforts. Enbridge's goal is to provide a high-quality restoration job that meets the expectations of landowners, as well as regulators, public officials and the communities in which Enbridge operates.

The restoration crews will return in the spring of 2015 to reseed areas that did not germinate and continue restoration efforts on all properties that have not been returned to as close to pre-construction condition as possible.

Enbridge strives to uphold the commitments it made relative to the replacement of the pipeline across your property. If you have any issues or concerns related to restoration, please contact your land agent. As the priority is now focused on restoration activities, it is possible that you may be working with a different agent. The phone numbers for the Restoration offices in Valparaiso, Indiana and Shelby, Michigan are listed on page 2. You can also call the project toll-free number (866-410-4356). Please leave a message so that your call can be returned.

Your patience and understanding in what has been a lengthy construction process is greatly appreciated. Now and in the future, Enbridge's focus remains on safe and efficient operations in the communities where we work and live.

Thank you.

Thomas Hodge
Project Director
Enbridge Energy

PROJECT CREWS MAY BE HEADING HOME, BUT OPERATIONAL PERSONNEL ARE IN PLACE TO MAINTAIN THE REPLACEMENT PIPELINE FOR YEARS TO COME

With the Line 6B replacement now operating, local personnel -- with the support of regional and company personnel -- are making safe operations of Line 6B the focus of what they do on a daily basis.

The Marshall incident in 2010 made a lasting impact on how Enbridge operates. The lessons Enbridge learned have made us a safer company. You can learn more at Enbridge.com/Michigan about the company's commitment to safety, environmental protection and the communities where Enbridge operates its pipeline systems.

You expect us to operate our pipelines safely. You expect us to protect the rivers and the land. We hear you and share those expectations.

disturbing activities.**

**Know what's below.
Call before you dig.**

Safe operation of the replacement Line 6B pipeline includes 24-hour-a-day monitoring from Enbridge's new pipeline system control center, routine air surveillance performed twice a month, pipeline operations personnel working in the area, and informing property owners and other stakeholders by sending information about pipeline safety through our ongoing Public Awareness Program. Find out more at:

Line 6B Replacement – By the Numbers

- ✓ \$2.6 billion spent to date since 2012 in capital investments
- ✓ Nearly 8 million hours worked on Line 6B replacement
- ✓ Over \$800,000 awarded to 55 municipalities along the Line 6B replacement and Line 79 pipeline routes as part of Enbridge's Environmental Stewardship Grant Program

Enbridge recognizes that construction activities have temporary impacts along the pipeline right-of-way. One way we give back and support communities that are impacted by our projects is to award environmental stewardship grants. The two examples pictured at left show recipients who have used their grants for projects like a pond fountain and solar panels. At the Coffee Creek Watershed Preserve, Enbridge's environmental stewardship helped purchase 418 trees.
